

Back-End Internship Assessment:

1. Create a list of blog APIs. The blog should have a title, description and category. (One blog should have one category only). The candidate should create APIs for the following (Please attach postman collection to your answer).
 - Get all blogs.
 - Get blog by Id.
 - Post blog
 - Update blog.
2. Find a pair with the given sum in an array. Given an unsorted integer array, print a pair with the given sum in it.

For example,

Input:

nums = [8, 7, 2, 5, 3, 1]

target = 10

Output:

Pair found (8, 2) or

Pair found (7, 3)

Input:

nums = [5, 2, 6, 8, 1, 9]

target = 12

Output: Pair not found.
